Office Action Summary	Application No. 10/632,831	Applicant(s) MAKINO, HIROSHI	
	Examiner George Fourson	Art Unit 2823	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art (AAPA) in view of Miyaoka et al 5,291,445.

Applicant's admits the formation of a memory cell array circuit with input/output sections 260 including MOSFET's with a high threshold voltage within the circuit portion of the chip to have been known prior to applicant's invention (instant figure 2). Applicant indicates the present invention to be an improvement over the admitted prior art device due to increased wiring efficiency (instant page 6, lines 10-23) and reduction of complexity associated with redesign of the layout pattern (instant page 7, lines 1-3).

Miyaoka et al discloses a memory array circuit with input/output section arranged in a loop around the memory cell array (figure 1).

It would have been obvious to one of ordinary skill in the art to combine the teachings of AAPA with those of Miyaoka et al to enable the input/output sections of the prior art device to be formed according to the teachings of Miyaoka et al because Miyaoka et al indicates that those locations are suitable for formation of such portions of the resulting circuit.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
